

Small e. RPT 1177-
PTO/SB/17 (08-03)
Approved for use through 07/31/2006. OMB 0651-0032
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

FEE TRANSMITTAL for FY 2003

Effective 01/01/2003. Patent fees are subject to annual revision.

☐ Applicant claims small entity status. See 37 CFR 1.27

TOTAL AMOUNT OF PAYMENT (\$) 330.00

Complete if Known

Application Number	09/484,749
Filing Date	01/18/2000
First Named Inventor	Qinyun Peng et al
Examiner Name	Arti R. Singh
Art Unit	1771
Attorney Docket No.	FDN-2604

METHOD OF PAYMENT (check all that apply)

☐ Check ☐ Credit card ☐ Money Order ☐ Other ☐ None

☒ Deposit Account:

Deposit Account Number: 50-1855
Deposit Account Name: Building Materials Investment Corporation

The Director is authorized to: (check all that apply)

☒ Charge fee(s) indicated below ☐ Credit any overpayments
☐ Charge any additional fee(s) during the pendency of this application
☐ Charge fee(s) indicated below, except for the filing fee to the above-identified deposit account.

FEE CALCULATION

1. BASIC FILING FEE

Large Entity Fee Code (\$)	Small Entity Fee Code (\$)	Fee Description	Fee Paid
1001 750	2001 375	Utility filing fee	
1002 330	2002 165	Design filing fee	
1003 520	2003 260	Plant filing fee	
1004 750	2004 375	Reissue filing fee	
1005 160	2005 80	Provisional filing fee	
SUBTOTAL (1) (\$)			

2. EXTRA CLAIM FEES FOR UTILITY AND REISSUE

	Extra Claims	Fee from below	Fee Paid
Total Claims	-20** =	X	
Independent Claims	-3** =	X	
Multiple Dependent			

Large Entity Fee Code (\$)	Small Entity Fee Code (\$)	Fee Description
1202 18	2202 9	Claims in excess of 20
1201 84	2201 42	Independent claims in excess of 3
1203 280	2203 140	Multiple dependent claim, if not paid
1204 84	2204 42	** Reissue independent claims over original patent
1205 18	2205 9	** Reissue claims in excess of 20 and over original patent
SUBTOTAL (2) (\$)		

**or number previously paid, if greater; For Reissues, see above

FEE CALCULATION (continued)

3. ADDITIONAL FEES

Large Entity Small Entity

Fee Code (\$)	Fee Code (\$)	Fee Description	Fee Paid

MAIL STOP APPEAL BRIEF-PATENTS
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

BRIEF ON APPEAL

This Appeal Brief is submitted in response to the Final Rejection of the Examiner mailed 09/10/2003, and to the filing of our Notice of Appeal mailed on 09/25/2003.

The Commissioner is hereby authorized to charge any fees or to credit any overpayment to Deposit Account No. 50-1855.

1. REAL PARTY IN INTEREST

BUILDING MATERIALS INVESTMENT CORPORATION, of 300 Delaware Avenue, Suite 303, Wilmington, Delaware 19801, is the owner of the entire right, title, and interest in the appealed application.

11/04/2003 AWONDAF1 00000039 501855 09484749

01 FC:1402 330.00 DA

2. RELATED APPEALS AND INTERFERENCES

There are no known appeals or interferences known to appellants or to the undersigned attorney for appellants which will directly affect or be directly affected by or have a bearing on the Board's decision in the instant appeal.

3. STATUS OF ALL CLAIMS

Claims 1, 2 and 4-8 are pending in the application and are appealed.

4. GROUPING OF CLAIMS

The rejected claims do not stand or fall together. Each claim is considered a separate invention and should be considered individually.

5. REFERENCES CITED

<u>U.S. PATENT</u>	<u>DATE</u>	<u>INVENTOR</u>	<u>CLASS/SUBCLASS</u>
5,518,586	05-1996	Mirous	162/156
3,865,682	02-1975	Marzocchi et al	161/170

6. THE INVENTION

The invention provides (1) 0.001% to 20% by weight of an adhesion modifier which is preferably (claim 4) a polysiloxane (2) applied to the surface of a glass mat and is non-reactive with its surface; and (3) whose asphalt-coated hand sheets and asphalt

SERIAL NO. 09/484,749

roofing shingles containing such treated glass mats meet or exceeds Tear Test D-1922 (ASTM D-3462, July 10, 1997 Ed.). In fact, such asphalt shingles have a tear strength of about 2207 in gf which is substantially in excess of the 1700 required by the ASTM standard for commercial asphalt-roofing shingles at conventional weights and without requiring modification of urea-formaldehyde binder used therein.

While the reason for the unexpected effect is not completely understood at present, it is observed (Figs. 1 and 2) that such adhesion modifier-treated, asphalt-impregnated glass mats feature a tear region in which the fibers are pulled out, not torn or broken, which enhances its tear strength.

7. THE REJECTION

Claims 1, 2 and 4-8 were rejected under 35 U.S.C. 103(a) on Mirous further in view of Marzocchi. The Examiner has indicated that Mirous discloses high tear strength glass mats having a urea-formaldehyde resin binder applied to a fibrous glass mat and useful in making roofing shingles.

8. THE ARGUMENT

Considering the references, it is seen that Mirous is directed only to a process of making the glass fiber mats themselves, which require a binder to hold the mat together. Usually the binder is a urea-formaldehyde resin. Mirous merely discovered that by adding water-insoluble anionic phosphate esters to the urea-formaldehyde resin, high tear strength mats per se could be prepared. Clearly, Mirous does not disclose, teach or suggest the polysiloxane adhesion modifier of the present invention, which is applied non-reactively to the surface of the glass mat and which promotes tear strength

that by adding water-insoluble anionic phosphate esters to the urea-formaldehyde resin, high tear strength mats per se could be prepared. Clearly, Mirous does not disclose, teach or suggest the adhesion modifier, e.g. a polysiloxane adhesion modifier of the present invention, which is applied non-reactively to the surface of the glass mat and which promotes tear strength in an asphalt-impregnated glass mat in an unusual way so that the ASTM standard is met or exceeded. Stated another way, the present invention begins where the Mirous process of binding the glass fibers left off. Specifically, in this invention, the glass fiber mat is thereafter coated with the polysiloxane adhesion modifier, suitably from a solution or emulsion which is applied, preferably by spraying or dipping, onto the wet or dry mat before curing.

Marzocchi is seen to only describe a composition for use in treatment of glass fibers to provide a more secure bonding relationship between glass fibers and elastomeric materials in the manufacture of glass fiber-reinforced elastomeric products. This composition is a resorcinol-aldehyde resin prepared by reacting resorcinol and an aldehyde in the presence of an amino silane, silanol or polysiloxane. Accordingly, the disclosure relates to the preparation of a new resin which has an organo-silicon compound chemically bonded to the resorcinol-aldehyde matrix. Of course, such organo-silicon compounds must be reactive enough to enter chemically into such matrix. Preferred are silanes having a readily hydrolysable group. These actives are not suitable as non-reactive adhesion modifiers in this invention.

In contrast, the polysiloxane adhesion modifiers in applicants' invention are not incorporated in the resin nor are they reactive, or intended to be reactive, with any elastomeric material. Quite the contrary, the adhesion modifiers of this invention are applied to the surface of the glass mats and are non-reactive with the glass mats and the asphalt-impregnated into the mats. They demote physical adhesion between mat and asphalt so that the fibers are pulled out, not torn.

SERIAL NO. 09/484,749

9. SUMMARY

In view of the foregoing, the claims in the application are believed to be allowable over the cited art alone or in combination. Reconsideration and reversal of the Examiner's rejection is respectfully solicited.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Walter Katz', written in a cursive style.

CLAIMS ON APPEAL

Claim 1. A glass fiber mat for use in making a roofing composite of asphalt-coated hand sheets and asphalt shingles, said mat comprising, by weight, about 68% to about 90% of fibers; about 10% to about 32% by weight of an organic resin binder; and having applied to the surface of said glass mat about 0.001% to about 20% by weight of an adhesion modifier which is non-reactive with said surface of the glass mat but which induces fiber pull-out during tear of the composite and thereby provides improved composite tear strength wherein said asphalt-coated hand sheets and asphalt shingles thereof meet or exceeds Tear Test D-1922 (ASTM D-3462, July 10, 1997 Ed), and wherein said adhesion modifier is a polysiloxane.

Claim 2. A glass fiber mat according to claim 1 wherein the amount of adhesion modifier is about 0.01% to about 10%.

Claim 4. A glass fiber mat according to claim 1 wherein said polysiloxane is a polyalkyl siloxane, a polyaryl siloxane, a polyalkylaryl siloxane or a polyether siloxane, or derivative thereof.

Claim 5. A glass fiber mat according to claim 4 wherein said polysiloxane is a polydimethyl siloxane or derivative thereof.

Claim 6. A glass fiber mat according to claim 4 wherein said polysiloxane has a molecular weight > 600 .

SERIAL NO. 09/484,749

Claim 7. A glass fiber mat according to claim 1 wherein said organic resin binder includes a urea-formaldehyde resin.

Claim 8. A glass fiber mat of claim 1 wherein said glass fibers have a length of about 3 mm to about 130 mm, and a diameter of about 5 micrometers to about 25 micrometers.
